

Coaching Innovation Experiments

unconscious incompetence conscious incompetence conscious competence

Coaching sessions to support Innovation Experiment Teams in the efficient pursuit of their challenges.

The best learning is the one that consolidates through practice with real experiments, within the hectic day-to-day schedule, and sharing space with the rest of our functions.

The one-time support of experts in Innovation gives experiment teams the necessary conviction and coherence to solidly progress towards the implementation of Innovation. At the same time, teams and experiments are enriched with synergies only obtained when confronting the real needs of each experiment with the theories and methodologies and with the experience of consultants.

Method

- Sessions up to 4 teams - maximum 40 min/team.
- Active learning (little theory, lots of practice)
- Focuses on learning “more from less instead of less from more”.
- The Pioneer Innovation Teams are the main players.
- The agility of the method results in a more efficient time management, learning more with less work in less time.

unconscious competence

Results

SKILL DEVELOPMENT

Reinforce the acquired skills on management methodologies for innovation initiatives.

PRACTICE

Implement real innovation experiments with the reprieve of being supported by an expert.

REAL PROGRESS

Convert experiments into approved and supported market initiatives.

SUSTAINABILITY

Consolidate the new and successful way of managing innovative initiatives into the daily working routines of the organization.

“Without these mentoring sessions we had not been able to make progress due to the day to day pressures. Today we just apply the new methodology naturally, without extra effort. On the contrary, we are achieving much better results more efficiently”.
